                                                                            The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from brosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1083
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1041
 Sequence
                           sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                             Disclosure; SEQ ID NO 23847; 21pp + Sequence Listing; English

The invention relates to improving the production of a secondary metabolite by a fungus. This involves modulating the expression of at least one ZBC (zinc binuclear cluster protein) gene in a manner to improve the yield of the secondary metabolite. Methods of the invention may be used for improving the production of the secondary metabolite e.g. antibacterial (such as beta-lactam), an anti-hypercholesterolaemic (such as lovastin or mevastatin), an immunosuppressant (such as cyclosporin A), an ergot alkaloid (such as ergotamine), an angiogenesis inhibitor (such

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ð
as ovalicin), a glucan synthase inhibitor, gliotoxin family of compounds, a fungal toxin, a modulator of cell surface receptor signalling; a plant growth regulator, a pigment, an insecticide, or an antineoplastic compound. The method results in a decrease in fermentor run-time, a decrease in the size of the fermentor required for the production of equivalent amounts of the secondary metabolite, or a decrease in the biomass required for the production, which translates into decrease in the waste that must be handled in downstream processing. The sequences given in records ABP3575-ABP3572 represent ZBC proteins.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained directly from NIPO at

The present invention describes primer sets for synthesising 5602
[11] Length cDNAs defined in the specification. Where a primer set
[22] Comprises: (a) an oligo-dT primer and an oligomucleotide complementary
[23] Comprises: (a) an oligo-dT primer and an oligomucleotide complementary
[24] Comprises one of
[25] Complementary strand of a polynucleotide which comprises one of
[26] Complementary strand of a polynucleotide which specification, where the
[27] Complementary strand of a polynucleotide which comprises a 5'-end
[28] Sequence and an oligomucleotide comprises a 5'-end
[27] Sequence and an oligomucleotide comprises a 5'-end
[28] Sequence complementary to a
[28] Sequence complementary to a
[28] Sequence complementary to a
[28] Sequence complementary to a
[29] Sequence of a polynucleotide which comprises a 5'-end
[29] Sequence and an oligomucleotide sequence, where the
[28] Sequence of a polynucleotide sequence of sequence
[29] Sequence of a polynucleotide sequence
[20] Sequence of a polynucleotide sequence
[20] Sequence of a polynucleotide sequence
[20] Sequence of sequence

The inventueseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               23-MAR-2000; 2000US-191637P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                      The present sequence represents a p102 protein. This protein is present CC the secretion associated 175 (SA-175) complex. Bight proteins form the CSA-175 complex, which binds a syntaxin-containing (SC) complex. The CSA-175 polypeptides and nucleotide sequences encoding them can be used CC for screening for compounds which modulate vesicular release involved in CC enhance binding between the SA-175 and SC complexes may be used to treat CC an affective disorder such as depression, manic-depressive disorders and CC disease or Huntington's disease. Compounds which inhibit binding between the treat CC disease or Huntington's disease. Compounds which inhibit binding between the SA-175 and SC complexes may be used to treat a disorder of thought, CC such as schizophrenia, or for anaesthesia. The compounds can also be used to inhervent in the endocrine system for treatment of hormonal CC imbalances, the immune system for intervention in antigen processing, as ererted immunomodulators, and viral processing, as well as sell-as applications, such as regulation of membrane trafficking CC during rapid cell division.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     p102 protein; secretion associated 17S complex; SA-17S; syntaxin-containing complex; SC complex; screening; modulate; syntaxin-containing complex; SC complex; secretory process; vesicular release; synaptic transmission; secretory process; treatment; affective disorder; depression; manic-depressive disorder; transmisty disorder; neurodegenerative disease; schizophrenia; anaesthesia; anxiety disorder; neurodegenerative disease; schizophrenia; anaesthesia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            07-OCT-1998

They are homologues of 16 and 116 kba proteins (see also AAW19601-02) obtd. from Mycoplasma pneumoniae. A genomic DNA sequence of M. genitalium contains contiguous open reading frames that code for the 2 polypeptides. Mycoplasma 16 or 116 kba proteins, or immunogenic fragments that include a T or B cell epitope, can be used in vaccines for prevention and treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mycoplasma; immunogen; vaccine; diagnosis; pneumonia; inflammation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The patent discloses novel cells comprising a nucleic acid encoding car gene product having phenylalanine hydroxylase (PAH) activity such car sphenylalanine hydroxylase (phhA), 4-carbinolamine dehydratese (CC as phenylalanine hydroxylase (phhA), 4-carbinolamine dehydratese (CC (phhB) and aromatic aminotransferase (phhC), which are derived for producing proteins comprising a protein enhancing and/or stabilising the proteins comprising a protein enhancing and/or stabilising the for producing pAH. The sequences of the invention are also useful CC for preparing a proteinaceous food product (animal protein such car a milk protein derived from casein, globulin or a whey protein case a milk protein derived from casein, globulin or a whey protein case the food product starting material which the cells or fusion proteins contacting case that at least part of the phenylalanine content of the starting material is converted into compounds that do not cause phenylatoruria (PKU) by the enzymatically active product. PAH enzyme is useful for manufacturing a medicament for treating PKU, which is an inherited cate of the content of the phenylalanine on the body of the content. The present sequence is a peptide sequence of phhAB crustinn protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            novel human proteins. These were isolated from expressed sequences tags (ESTS). They can be used to stimulate cell growth, to regulate haematopoisesis e.g. to treat aplastic anaemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate activin or inhibin e.g. to treat inferrility, to regulate haemostasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. parkinson's disease. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                           Respiratory disease; pneumonia; bronchitis; heart disease; sarcoidosis; sinusitis; purulent otitis media; erythema nodosum; pharyngitis; vaccine; neutralising epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                   C. pneumoniae protein involved in metabolism of nucleic acids.

                                             AMY34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see AMX91990) of Chlamydia pneumoniae.

C. pneumoniae causes respiratory disease such as pneumonia and bronchius and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent citis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AMY3484-Y3589) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.

CC The protein may be used in a vaccine to prevent or treat H. pylori

CC useful as potential H. pylori polypeptide binding compounds,

CC useful as potential H. pylori life cycle activators or inhibitors. The

CN H. pylori in a sample and the diagnosis of H. pylori infection of

CC acid sequences complementary to the DNA act as antisense sequences and

CC acid sequences complementary to the DNA act as antisense sequences and

CC against the protein can be used in immunoassays to evaluate the abundance

CC and distribution of H. pylori mRNA. Antibodies

CC H. pylori (ATCC 55679) was determined from overlapping contigs generated

CC by mechanically shearing the bacterial DNA. The sequences were analysed

CC offined by computer evaluation. To identify likely H. pylori artigens for

CC vaccine development, the amino acid sequences predicted coding regions

CC membrane proteins. Having identified and determined the sequences of

CC interest, particular regions can be isolated from H. pylori by ECR

CC more amplification for recombinant polypeptide production, e.g. in E. coli

AAH53304 to AAH53970 represent nucleic acids (I) encoding polypeptides (II), given in AAGG1454 to AAG83120, from Staphylococcus epidermidis. (II) and (II) can have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the S. epidermidis polypeptides (II) wish the production of vectors containing them which are used to produce hosts cells which express the polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used for the actument of S. epidermidis infections, e.g. endocarditis. AAH5391 to AAH5509 represent specifically claimed S. epidermidis genomic DNA polymucleotide sequences from the present invention. AH55091 to AAH5509 represent oligonucleotide sequences and primers which are used in the exemplification of the present invention.

N. B. The present invention specifically claims all the polymucleotide sequences given in the sequence listing of the present specification, however the sequence listing only goes up to SEQ ID NO:4454 so even though sequences are given in the disclosure for SEQ ID NO:4465 to 4472, on sequences are given in the disclosure for SEQ ID NO:4455 to 4464.
                                                                                                           Nucleic acids encoding polypeptides from Staphylococcus epidermidis, useful for vaccinating against infections, e.g. endocarditis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAW13825 standard; Protein; 1226 AA.

Novel yeast SRB (suppressor of RNA polymerase B) proteins SRB4, SRB5, SRB9, SRB9, SRB10 and SRB11 (AAW18321-28) are transcription regulatory factors that act as positive and negative regulators of RNA polymerase II activity, and are components of the RNA polymerase II holoenzyme. They were identified using methods designed to identify transcription factors involved in RNA polymerase II c-terminal domain (CTD) function. SRBs and SRB9 appear to repress CTD activity. Genomic clones (AAT59904-11) for the SRBs have been obtd. SRBs can be used to treat diseases resulting from alteration or deletion of the SRB gene, pref. by gene transfer technology. They can also be used in in vitro transcription of DNA and to identify endeds. that modify gene transcription.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        .Match

                                                                                                                                                                                                                                                                                  The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB3000-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogutt and cheese.

Note: The sequence data for this patent is based on equivalent patent wo200177334 (published 18-OCT-2001) which is available in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                               Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          117
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  104
```

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical insging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     22;
 other traits to assess biodiversity
responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00100-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences.

The invention relates to an isolated or recombinant homologue of US28 protein which binds a chemokine (encoded by an open reading frame in the unique short (US) region in human cytomegalovirus (CWW) genome), having at least 75% identity to a rheasum monkey RhUS28.1-RhUS28.5, Rh78 and RhUS33 (encoded by an open reading frame 78 in the unique long (UI) and CRW sister of the comprising an immunogenic acids. Also included are a vector comprising the nucleic acids, a cell comprising the nucleic acids, a vaccine comprising an immunogenic CWV polypeptide encoded by at least a region of CWV genome in which the polypeptide encoded by at least a region of CWV genome in which the polypeptide encoded by at least a region of CWV genome in which the polypeptide encoded by at least a region of CWV genome in which the polymuclectide sequence encoding US28 or inactivated, identifying an agent that reduces CWV dissemination in an animal, by determining whether the agent inhibits the expression or us28 homologue and treating an animal infected with CWV or at risk of infection by CWV. by administering the agent to the animal. The vaccine is useful for treating an animal infected with cytomegalovirus or at a risk of infection by CWV. The vaccine is also useful for inducing a treating an animal infected with cytomegalovirus or at a creating diseases including retinitis, encephalitis and pneumocystis caused by CWV us or UL protein used to construct the vaccine of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    12;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  and in methods for
Isolated or recombinant homologues of US28 proteins and nucleic acids encoding the proteins, for use in vaccine compositions for treating an animal infected with, or at risk of infection by, cytomegalovirus -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 RHKCISILEFFKNLLFVHLLSLSKNQREGCSTDMAVVSTPFFNRNLWYRLLSSRFSLWKS 120

                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                  Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to novel human secreted polypeptides. The projectides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as mutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; in treatment of leukaemias. AAU33510-AAU33304 represent the amino acid of sequences of novel human secreted proteins of the invention.

This invention describes a novel method for the genetic treatment of hyperlipidemia by altering genes, in hepatcoyres, for apoprotein (apo) B, E or Al. Low density lipoprotein (LDL) levels in the blood are reduced by altering an apo B gene (I) in a hepatcoyre. The invention describes a method for the therapeutic and/or prophylactic method involving altering an apo B gene in hepatcoytes by introducing the mutations Argilacys or Cys158Arg and a method for ameliorating atheroscis by altering the apo Al gene in a hepatcoyte so that the altered protein can dimerize. Altering expression of apo genes regulates levels of high and low density lipoprotein cholesterol. Altering expression of apo B, E and Al genes is used to treat or prevent atherosclerosis, coronary heart disease, Alzheimer's disease, hypobetalipoproteinemia, This sequence represents a fragment of the human Apo B protein described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Key

```
This sequence represents the human apoliporptoein B-100 (apoB-100).

Fragments of this sequence can be used in the peptide of the invention, which has the formula (I), or their variants with one or more internal deletions, insertions or substitutions, while retaining anti-coagulant properties of apolipoprotein B-100 (apoB-100).

21 - than terminus of the peptide, or 1-47 amino acids (as);

22 = the C terminus of the peptide, are used for simultaneous, separate compositions containing the peptide, a terminal amide group or 1-77 as.

32 = the C terminus of the peptide, a terminal amide group or 1-77 as.

33 = the C terminus of the peptide, a terminal amide group or 1-77 as.

34 = the C terminus of the peptide, a terminal amide group or 1-77 as.

35 = the C terminus of the peptide, a terminal amide group or 1-77 as.

36 = the C terminus of the peptide, a terminal amide group or 1-77 as.

37 = the C terminus of the peptide, a terminal amide group or 1-77 as.

38 = the C terminus of the peptide, a terminal amide group or 1-77 as.

39 = the C terminus of the peptide, a terminal amide perior or signification (e.g. during or after spread; the peptide are used for simultaneous, separate or spread to inhibit thromboplastin and peptide, inhibits activation of the surface of thromboplastin and of platelete by thrombin. ApoB-100 is a major apoprotein component of very-low density density lipoproteins (VLDL), intermediate density lipoprotein (IDL), low density lipoproteins (VLDL), and lipoprotein a. The specification density lipoproteins (LDL) and lipoprotein a. The specification binding and in vivo transport of nucleic acids. Binding domains (see AAW96827-77) and nuclear localisation sequences (see AAW96878-97) for use in the composition can be derived from the present sequence. The composition is used to deliver nucleic acids to eukaryotic cells, in vivo or in vitro, for expressing a therapeutic polypeptide or antisense molecule (or ribozyme). Specifically they are used for gene therapy of cancers (particularly non-small cell lung carcinoma), diabetes, cystic fibrosis and arteriosclerosis.

This polypeptide comprises a novel thermostable DNA polymerase of the thermophilic anaerobe Thermoanaerobacter thermophicous Its amino acid sequence was deduced from an isolated genomic DNA sequence (see AAT90447). Recombinant DNA polymerase can be produced in host cells. The enzyme can be used in claimed methods: (a) for strand displacement amplification (SDA) when used with a thermostable restriction enzyme; (b) for production of cDNA when used in conjunction with polymerase and deoxyribonucleotides; and (c) to provide reverse transcription
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                       19;
                                                                                                                                              This sequence represents the DNA polymerase of Thermoanaerobacter thermohydrosulturious (TE), deduced from PCR amplified genomic DNA (see AAZ19659). Claimed DNA polymerases (see AAX18131. AAX1815 and AAX31816) have the exonuclease activity of this enzyme removed by having 540-582 amino acids removed from the N-terminus or having an amino acid substitution at position 8 or 706 of the sequence. A novel method for PCR uses an enzymatically active DNA polymerase that has at least 80% identity in its amino acid sequence to the Ttb DNA polymerase and has an exonuclease activity removed. Kits for and reverse transcription-PCR are claimed that utilise such Exonant everse. The Tt DNA polymerase is stable at elevated bNA polymerases. The Tt DNA polymerase is stable at elevated temperatures, e.g. 70+ deg C. Removal of its exonuclease activity does not affect its ability to replicate DNA or its thermostability.
                                                        polymerase from Thermoanaerobacter thermohydrosulfuricus, used amplification, sequencing, polymerase chain reaction and

This sequence represents a claimed mutant DNA polymerase of Thermoanderobacter thermohydrosulfuricus (Tt) in which the Asp-8 residue of the native enzyme is replaced by Ala. This amino acid substitution removes the acondidease activity of the DNA polymerase. Claimed DNA polymerases have their exonuclease activity removed by N-terminal deletion or amino acid substitution. A novel method for PCR uses an enzymatically active DNA polymerase and has an exonuclease activity removed. Kits for that has at least 80% identity in its amino acid sequence to the Tt DNA polymerase and has an exonuclease activity removed. Kits for PCR, strand displacement amplification of DNA, DNA sequencing, and reverse transcription-PCR are claimed that utilise such Exo-DNA polymerases. The Tt DNA polymerase is stable at elevated temperatures, e.g. 70+ deg C. Removal of its exonuclease activity choses not affect the ability to replicate DNA or its thermostability. Note: the present sequence is not shown in the specification but is derived from the Tt DNA polymerase seugnece given in figure 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New DNA polymerase from Thermoanaerobacter thermohydrosulfuricus, used for DNA amplification, sequencing, polymerase chain reaction and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              184 MRTLDKDNFSLTPDLIHDLL-------GHVPWLLHPSFSEFFINMGRLFT 226
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          352 KEIFEKEDFEFTTHEIKDFLVRLSYKGIECKSKYIDTAVMAYLLNPSESNY--DLDRVLK 409
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | : || : || : || 410 KYL-KVD-VPSYEGIFGKGRDKKKIEEIDENILADYICSRCVYLFDLKEKLMNFIEEMDM 467

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ş
                                                 This sequence represents a claimed mutant DNA polymerase of Thermoanaerobacter thermohydrosulfurious (Tt) in which the Phe-706 residue of the native enzyme is replaced by Tyr. This amino acid substitution removes the exonuclease activity of the DNA polymerase. Claimed DNA polymerases have their exonuclease activity removed by N-terminal deletion or amino acid substitution. A novel method for PCR uses an enzymatically active DNA polymerase that has at least 80% identity in its amino acid sequence to the Tt CDNA polymerase and has an exonuclease activity removed. Kits for PCR, strand displacement amplification of DNA, DNA sequencing, and reverse transcription-PCR are claimed that utilise such Exo-CDNA polymerases. The Tt DNA polymerase is stable at elevated temperatures, e.g. 70+ deg C. Removal of its exonuclease activity Note: the present sequence is not shown in the specification but is concerned from the Tt DNA polymerase sequence given in figure 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New DNA polymerase from Thermoanaerobacter thermohydrosulfuricus, used for DNA amplification, sequencing, polymerase chain reaction and reverse transcription -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        17-MAR-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         T. thermohydrosulfuricus DNA polymerase F706Y mutant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 06-DEC-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAY31816;
